- The paper consists of 4 sections :  

<b>Section – A – Reading : 16 Marks</b>	<b>Section – B – Writing : 18 Marks</b>
<b>Section – C – Grammar : 16 Marks</b>	<b>Section – D – Literature : 30 Marks</b>

**SECTION A: READING (16 MARKS)**

**A1. Read the following passage carefully and answer the questions that follow: (08 Marks)**

**SPIDERS**

1. Did you always think that spiders were insects? Actually spiders are arachnids and not insects. They have eight legs while insects usually have six. Spiders also do not have wings and antennae that most insects have.
2. Spiders make silk threads that they use in many different ways. They have a gland in their abdomen and release the silk threads to create the cobwebs that we dust away.
3. Silk material is actually a complex protein substance. Some spiders even eat the damaged or old webs to conserve the protein rich used silk. A good lesson in recycling! With these strands they receive and send out signals to each other and express fear, recognition, anger, hunger or desire. In the web the spiders wait for an unsuspecting victim.
4. They have no teeth and spiders feed by injecting a poison into their victims, which also acts as a powerful digestive fluid. Spiders are natural enemies of insects and help to keep them away. Next time, when you see a spider, remember that spiders are among our greatest friends.

**Choose the most appropriate option:**
